<http://www.lulu.com/astrology>

Special planets are met by special astrology. The demotion of Pluto and enthroning of 2003 UB313 as the major dwarf planet is in fact nothing really new in our long research.

What makes our services special? Let us introduce you to our way of future changing.

- Enjoy your horoscope, get timed romance, use the dwarf planets in synastry, have a safe childbirth, get married on time, find an ideal partner with your personal cosmic secretary, scan and change your bright future, discreate all bad transits, find a new job with the reality rendering tools or enrich yourself at the casino with the dwarf planets.
- We base our observations on the real sky. In the past 11 000 years the skies have changed face as concern the precession of the ascendant. We give you your true natal skies completely clear from superstition. Our work is based on NASA calculations as opposed to so-called “astrological” programs for the masses.
- Alice was born on August 4<sup>th</sup> 2004 with Moon in Cetus, ascendant Hydra, Mercury in Sextans, Venus in Orion, Juno in Scutum and Pluto in Serpens. She is a special child and so is the yet unborn August 2007 baby with Venus in Hydra. Children have the right to know their true natal positions as well as to be free from lies that go under the name of “astrology” but are in fact sheer superstition and enemy of the baby itself.
- You will not only get familiar with the new dwarf planets in your horoscope but also with your true natal positions. You may have Sun in Ophiuchus, ascendant Canis Minor, Moon in Auriga, Mercury in Sextans, Venus in Scutum, Mars in Cetus, Jupiter in Ophiuchus, Uranus in Cetus, Neptune in Orion or Pluto in Coma Berenices. No astrology as based on superstition has ever prepared you for the true adventure!
- The publications about 2003 UB313 were published on regular basis since August 1<sup>st</sup> 2005. This makes our site historical from the point of view of the dwarf planets. Other dwarf planets were scanned and delineated as along with 2003 UB313 such as Pluto in Serpens or 2005 FY9 in Coma Berenices. NASA based ephemeris and astronomical equipment warrant detriment to superstition as well as accuracy.

- The dwarf planet delineation happens within the frame of the astronomic zodiac and precessed ascendant. We corrected thousand years of error by simply taking sides with astronomy. The dwarf planets are part to the reformation of the zodiac.
- We wrote all the delineation for the objects immediately after their discovery time. Any newly proclaimed dwarf planet has already its delineation in the 12 houses.
- We scan the real skies on daily basis with all objects of interest. In this way we are familiar with several hundreds of objects that stood prominent in our maps in the past years. This is like saying we know centaur Pholus, cubewano Varuna or dwarf planet 2003 UB3131 “since they were babies”. This is especially true of dwarf planet 2003 UB313 that was “cradled” in its “natal” Cetus constellation since August 1<sup>st</sup> 2005 when we sold our first (then “10<sup>th</sup> Planet in Love”) publication. 2003 UB313 is an old friend whether in Cetus or Lynx constellation and moving across a special part of sky.
- The delineation for 2003 UB313 is not only available in the 12 houses but also through its long cycle in the IAU constellations that were never before used in daily astrology. 2003 UB313 does not move along the ecliptic and thus cannot possibly be treated like e.g. Mars. For illustration purposes we could intimate that 2003 UB313 moves “perpendicularly” to the ecliptic; a path historically defined as the “X Zodiac”.
- The planets and dwarf planets as well as comets, centaurs and objects of interest are treated in their natural position in space. The object we are scanning is a real astronomic object in space. Our methods add accuracy to astrological prediction.
- Detail is paramount, as we are able to produce not only accurate NASA ephemeris for Pluto and Pluto barycenter or Charon itself but also for the new Pluto moons recently named Nix and Hydra.
- Our prediction methods are based on astronomic simulation. When Venus is moving into e.g. Sextans it is “progressed” into that constellation with according predictions.
- The services come in PDF format. A detailed scan of the natal skies focuses on the four horizons, main clusters of minor planets, dwarf planets, the position of the planets in their appropriate IAU constellation, true natal horizon as well as descendant. We dedicated several special publications to the accurate scan of the descendant and 7<sup>th</sup> house in astrology. This important point in astrology has been neglected since observation was left for imprecise tables and ephemeris. What seems a 7<sup>th</sup> house Neptune can easily be a 6<sup>th</sup> house Neptune and vice versa!
- We equip the initiate not only with a precise scan of one’s personal future, present and past but also with the means to change it according to private wishes. The tools enabling one to change the occurrences even in minutes are called the Real Time Reality Rendering Tools. Some of the favorite “instant magick” tools you are bound to meet on the site are the Personal Cosmic Secretary, Cascade, SnowCrash and O5.
